

All the Power of SnapTracker Now in Your Hand

SnapTracker is now compatible with new Honeywell devices.

The new SnapTracker app makes your warehouse staff **mobile, more accurate and more efficient**. Upload data, perform movements and checks, add photos to your Standards, all with our scanner instead of at a computer location. Digital images, work order tickets and processing all improve accuracy and reduce wrong pulls. **All your inventory data, now at your fingertips.**

Uninterrupted Workflow

Now, through an active internet connection you can login to SnapTracker to scan or **enter data with mobile live processing**. You can choose to upload as you go and save processing time or do a batch upload if you prefer. Set your processing mode by customer and user. Either way, you are notified of potential errors.

Intuitive and Efficient

Improves productivity and reduces errors with new Lookup options that facilitate product identification directly in the app and reduces walk time to a computer. Or, perform spot checks on a single bay location, and identify products from images right on your device. See all the information on your work orders without a paper ticket (printing is optional) and review batch history whenever needed.

Your Choice of Compatible Honeywell Devices

Built for Warehousing –
Rugged, Heat Resistant
No Active Sync Required

CN80

Physical Keyboard
More Drop Resistant
Camera included
Updatable
